this book narrates the history of the initiation and development of elementary particle physics in India and by Indians focusing on the first half of the twentieth century the thread is taken up with the introduction of western science into India in the previous century the contents are a mixture of science and biographies interspersed with anecdotes and reflections on the historical and societal connections the style is generally non technical with any technical issues explained and interwoven into the narrative this book is of interest to scientists to people with interest in science and the history of science students curious about the initiation of science in the Indian context and about the famous Indian scientists as well as administrators who wish to understand the roots of current Indian science especially in the context of particle physics

over the past decades chromatin remodelling has emerged as an important regulator of gene expression and plant defense this book provides a detailed understanding of the epigenetic mechanisms involved in plants of agronomic importance the information presented here is significant because it is expected to provide the knowledge needed to develop in the future treatments to manipulate and selectively activate inhibit proteins and metabolic pathways to counter pathogens to treat important diseases and to increase crop productivity new approaches of this kind and the development of new technologies will certainly increase our knowledge of currently known post translational modifications and facilitate the understanding of their roles in for example host pathogen interactions and crop productivity furthermore we provide important insight on how the plant epigenome changes in response to developmental or environmental stimuli how chromatin modifications are established and maintained to which degree they are used throughout the genome and how chromatin modifications influence each another

this book is divided into two main sections and covers a broad range of issues important for health practitioners to be aware of when caring for people with co morbid diabetes and depression

section one of the book contains the overall ideas and the more recent developments in measuring psychological morbidity in people with diabetes when attempting to identify people with depression or other psychological problems it is important for practitioners to recognize the limitations of screening as well as its utility issues such as the basic principles regarding when and when not to screen the cultural applicability of tools different questionnaire formats and key concepts such as sensitivity and specificity of tools and their positive and negative predictive value will be considered in particular there has been increased interest in the concept of diabetes related distress and several tools have been developed to measure this there are broad based measures of distress such as the problem areas in diabetes paid scale the diabetes adjustment scale das the diabetes health profile the fear of hypoglycemia scale etc there are also a range of generic quality of life tools which have been used effectively in people with diabetes for example the medical outcomes survey short forms sf36 sf12 the world health organisation well being questionnaire who 5 and the eq5 d these tools are important because they measure aspects of psychological well being that are specifically associated with the experience of having a long term conditions and so have important implications for both self care and health care practice the potential overlap of symptoms of depression and symptoms of diabetes related distress are considered in this section and the implications for practice discussed section two covers the most commonly used tools that have been used to screen for depression for each tool considered some information which is easily referred to by the reader is set out in a table which includes details of the authors time of first use country where it was first developed some examples of the questions used the languages it is available in data on sensitivity specificity each instrument will then be discussed in terms of its use in research as well as practice and its applicability in different patient groups different cultural settings and so on guidance on the practical use of each tool is included and the most popular depression screening tools are focussed on

since the discovery of neutrino oscillations neutrino physics has become an interesting field of research in physics they imply that neutrino must have a small mass and that the neutrinos coupled to the charged leptons are mixtures of the mass eigenstates analogous to the flavor mixing of the quarks the mixing angles for the quarks are small but for the leptons two of the mixing angles are large the masses of the three neutrinos must be very small less than 1 eV but from the oscillation experiments we only know the mass differences the absolute masses are still unknown also we do not know if the masses of the neutrinos are Dirac masses as the masses of the charged leptons and of the quarks or whether they are Majorana masses in this volume an overview of the present state of research in neutrino physics is given by well known experimentalists and theorists the contents originated from talks and discussions at a recent conference addressing some of the most pressing open questions in neutrino physics range from the oscillation experiments to CP violation for leptons to texture zero mass matrices and to the role of neutrinos in astrophysics and cosmology

way the left revolutionary parties too restrict women s engagement

wheat researchers have made unique contributions and excellent progress to the production increase over the past several decades mainly in the less developed countries however there are many challenges that still lie ahead to make food more accessible than ever before in a sustainable manner and to meet the needs of a global growing population numerous biotic and abiotic stresses affect wheat in major production areas and its future growth will most likely come from marginal environments where such stresses play even more important role developing countries are becoming increasingly urbanized as urban populations grow productive land disappears and this implies the need for more intensive cropping to keep pace water utilization for agriculture is also facing more competition from uses in urban areas focused efforts to improve wheat water use efficiency are crucial to ensure sustainability of food production in water constrained regions current crop management systems such as reduced or zero tillage stubble retention and precision agriculture are vital to satisfy the increasing needs of food and maintain at the same time the sustainability of natural resources the widespread adoption of conservation farming techniques requires the introduction of changes to wheat varieties in disease resistance particularly stubble born diseases
