this book explores the evolving nature of objectivity in the history of science and its implications for science education it is generally considered that objectivity certainty truth universality the scientific method and the accumulation of experimental data characterize both science and science education such universal values associated with science may be challenged while studying controversies in their original historical context the scientific

enterprise is not characterized by objectivity or the scientific method but rather controversies alternative interpretations of data ambiguity and uncertainty although objectivity is not synonymous with truth or certainty it has eclipsed other epistemic virtues and to be objective is often used as a synonym for scientific recent scholarship in history and philosophy of science has shown that it is not the experimental data baconian orgy of quantification but rather the diversity plurality in a scientific discipline that contributes toward understanding objectivity history of science shows that objectivity and subjectivity can be considered as the two poles of a continuum and this dualism leads to a conflict in understanding the evolving nature of objectivity the history of objectivity is nothing less than the history of science itself and the evolving and varying forms of objectivity does not mean that one replaced the other in a sequence but rather each form supplements the others this book is remarkable for its insistence that the philosophy of science and in particular that discipline's analysis of objectivity as the supposed hallmark of the scientific method is of direct value to teachers of science meticulously yet in a most readable way mansoor niaz looks at the way objectivity has been dealt with over the years in influential educational journals and in textbooks it's fascinating how certain perspectives fade while basic questions show no sign of going away there are few books that take both philosophy and education seriously this one does roald hoffmann cornell university chemist writer and nobel laureate in chemistry

the commercial importance of wine continues to increase across the globe with the availability of many new wines encompassing a remarkable and exciting range of flavours wine flavour chemistry focuses on aspects of wine making procedures that are important in the development of flavour describing some of the grapes used and their resulting wines in depth descriptions of flavour reaction pathways are given together with cutting edge scientific information concerning flavour release its associated chemistry and physics and the sensory perception of volatile flavours wine flavour chemistry contains a vast wealth of information describing components of wine their underlying chemistry and their possible role in the taste and smell characteristics of wines fortified wines sherry and port many extremely useful tables are included linking information on grapes wines composition and resulting perceived flavours wine flavour chemistry is essential reading for all those involved in commercial wine making be it in production trade or research the book will be of great use and interest to all enologists and to food and beverage scientists and technologists in commercial companies and within the
